Answer:
Explanation:

Explanation

Step 1: Create an Azure Automation account
Runbooks live within the Azure Automation account and can
execute PowerShell scripts.
Step 2: Import PowerShell modules to the Azure Automation
account
Under 'Assets' from the Azure Automation account Resources
section select 'to add in Modules to the runbook. To execute
key vault cmdlets in the runbook, we need to add
AzureRM.profile and AzureRM.key vault.
Step 3: Create a connection resource in the Azure Automation
account
You can use the sample code below, taken from the
AzureAutomationTutorialScript example runbook, to authenticate
using the Run As account to manage Resource Manager resources
with your runbooks. The AzureRunAsConnection is a connection
asset automatically created when we created 'run as accounts'
above.
This can be found under Assets -> Connections. After the
authentication code, run the same code above to get all the
keys from the vault.

```
$connectionName = "AzureRunAsConnection"
try
{
# Get the connection "AzureRunAsConnection "
$servicePrincipalConnection=Get-AutomationConnection -Name
$connectionName
"Logging in to Azure..."
Add-AzureRmAccount `
-ServicePrincipal `
-TenantId $servicePrincipalConnection.TenantId `
-ApplicationId $servicePrincipalConnection.ApplicationId `
-CertificateThumbprint
$servicePrincipalConnection.CertificateThumbprint
}
```
