**NEW QUESTION: 3**

Which of the following is described in the statement below?  
"It measures the quality objectives of the project. It provides the foundation for measuring and reporting quality performance as part of the performance measurement baseline."

- A. Quality baseline
- B. Scope baseline
- C. Cost baseline
- D. Schedule baseline

**Answer: A**

Explanation:

Explanation/Reference:

Explanation:

Answer option D is correct.

The quality baseline measures the quality objectives of the project. The quality baseline provides the foundation for measuring and reporting quality performance as part of the performance measurement baseline.

Answer option A is incorrect. Schedule baseline is a project schedule used in measuring project progress.

It helps provide a comparison with the actual progress of work against the schedule and to determine if performance to date is within acceptable parameters. Any change caused by change in scope of the project invalidates the original schedule and requires a new baseline schedule.

Answer option C is incorrect. Cost baseline is an approved time-phased budget that monitors and measures cost performance throughout the project life cycle. It includes a budget contingency to accommodate the risk of incurring unidentifiable but normally occurring costs within the defined scope.

Cost baseline varies from project to project, depending on the project's budget and schedule.

Answer option B is incorrect. The scope baseline is an element of the project management plan. The contents of the scope baseline include the following:

Project scope statement: It includes the product scope description and the project deliverables, and

defines the product user acceptance criteria.

WBS: It defines each deliverable and the decomposition of the deliverables into work packages.

WBS dictionary: It contains the detailed description of work and technical documentation for each WBS

element.
